1 A. I do.

2 Q. And is analysis of public  
3 health data something with which you have  
4 expertise?

5 A. Yes. So in economics, we  
6 basically put forward a set of tools that  
7 actually can be used to study many different  
8 phenomenon. Some of those phenomenon are, of  
9 course, things that sound like the natural  
10 domain of economics, things like GDP,  
11 perhaps, or unemployment rates.

12 But economists also apply that  
13 same set of tools to study other phenomenon,  
14 including phenomenon of public health. I  
15 myself have published on public health  
16 measures.

17 For example, infant mortality  
18 is undoubtedly a metric of public health.  
19 That's something where I've analyzed impact  
20 of certain social phenomenon on infant  
21 mortality measures.

22 Also the rate at which, for  
23 example, pregnant women engage in smoking or  
24 consumption of alcohol during pregnancy by  
25 self-report as on birth certificate data.
