 [A/C Priv] Adults Age misrepresentation

5 comments

Using FBAP for aging down is unreliable, especially at the U16/16+ age band

[REDACTED]@meta.com can we explain what we mean by "unreliable"? is this something that Yoti says they can't support?

Amir [REDACTED]

• 7:55 PM, Sep 7 (PDT)

If it's unreliable, shouldn't we just not make it an option at all? ie this goes beyond 'age compliance'. A base requirement is reliability.

New

Clarified this - we have not tested it at this band to establish reliability based on our data - while Yoti says they have high precision for all ages, we have not established it first hand yet.

Unclear if tier 2 IDs are accepted at this point.

[REDACTED]@meta.com [REDACTED]i@meta.com [REDACTED]@meta.com This one can be used for age-down as well right? where are we on this candidate?

Apple doesn't allow Social media apps to use their wallet to gather age. Also, apple wallet is only available in 4 states in USA currently. Most of the states are building out their own Digital ID programs and it will become more fragmented in the future. With Google API, google wallet based digital ID was demoed at the recent Google I/O and won't be ready till Google 14 adoption picks up - given the fragmentation level of Android, realistically 2 years out on this one - there is another way to do this on google using Google People API which we will explore H1'24.

Enforce age verification checkpoint

[REDACTED]@meta.com BTW - through the protocol to identify over-age and under-age we probably have experience in identifying if a user is a teen.

We do - however, we do not trigger an Age Verification in such a case today given the potential revenue impact it can cause.

We discussed a dismissable approach when stated and predicted age do not match that we might get to in the next half.
