New Mexico Attorney Generals Office

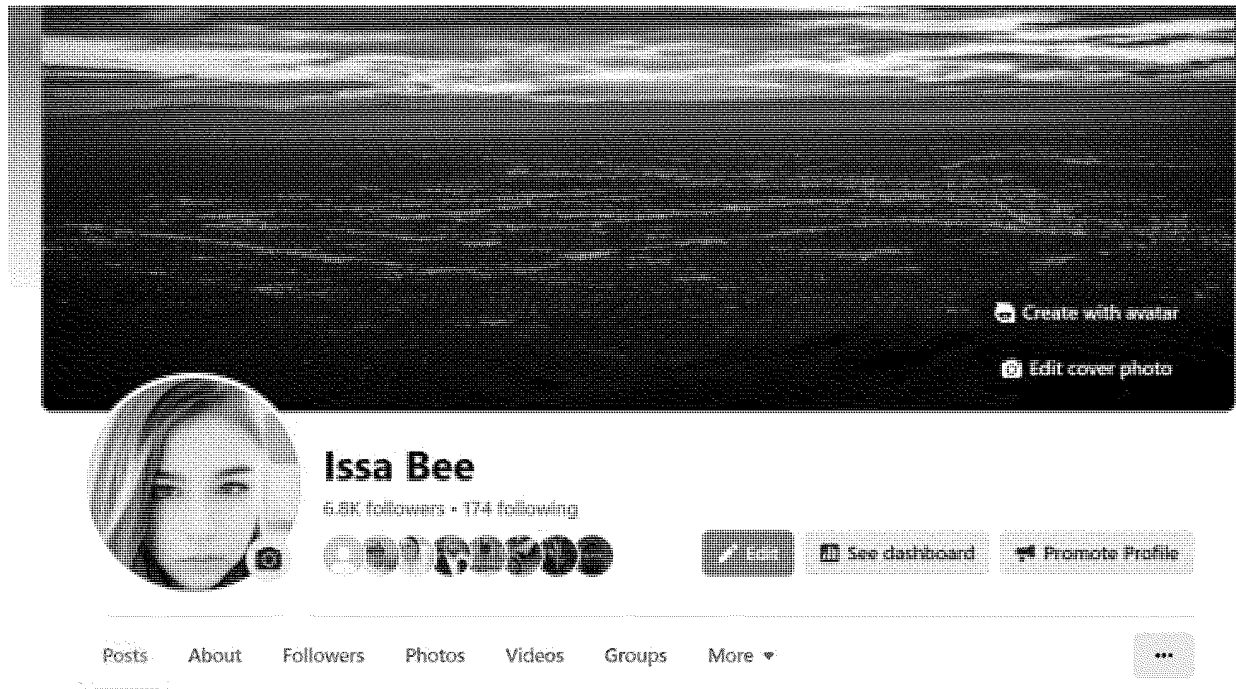

SID Investigative Report for Social Media Civil Action Case

Re: ICAC UC Persona – Issa Bee / Carolina Boerne

Completed by: Rickey Kitch – Investigator / Criminal Intelligence Analyst

November 15, 2023

On August 21, 2023 I opened a undercover ICAC Chat account for a 13 year-old female on Facebook Meta. I listed the profile as “Issa Bee”, the actual name of the persona was Carolina Boerne who had just moved to rural New Mexico from Texas. The persona listed July 15, 2000 as a date of birth to bypass having to obtain a limited children’s Facebook profile and Facebook messenger account.

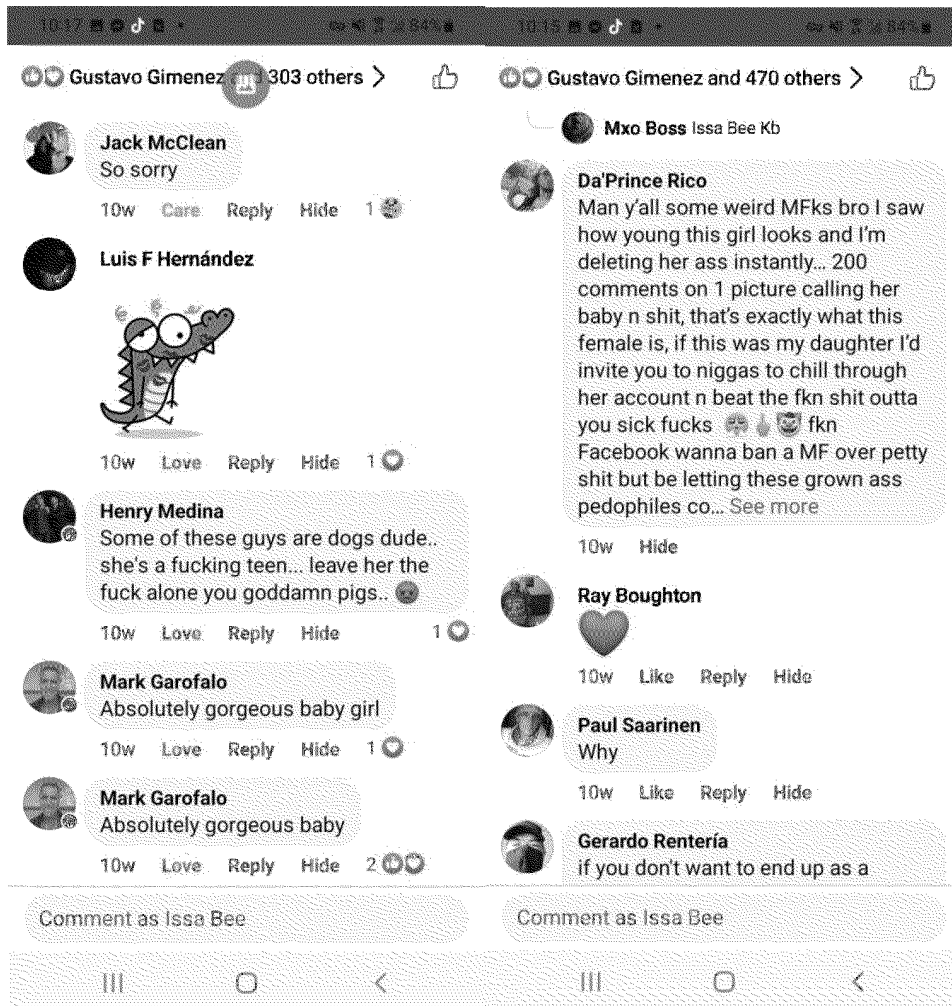

The persona has alluded to disclosure of physical / sexual assault, mental health issues and PTSD, and potentially being a victim of human trafficking by friends and relatives on many posts since she has been online. To my knowledge the profile has never received a closure or censorship from the Facebook Community Standards Monitors. The profile has received ads and notifications advocating mental health treatment as well as advertisements for civil suits including victims of Human Trafficking and a local to New Mexico suit against a school teacher who was recently convicted of sexually assaulting several teen females.

The profile has the maximum allotted 5000 Facebook friends and over 6,700 Facebook followers which are discrete from the friends. The account is not monetized or running advertisements, however, it is a professional account which allows marketing outlooks and strategy suggestions from Meta on growing the account and followers.

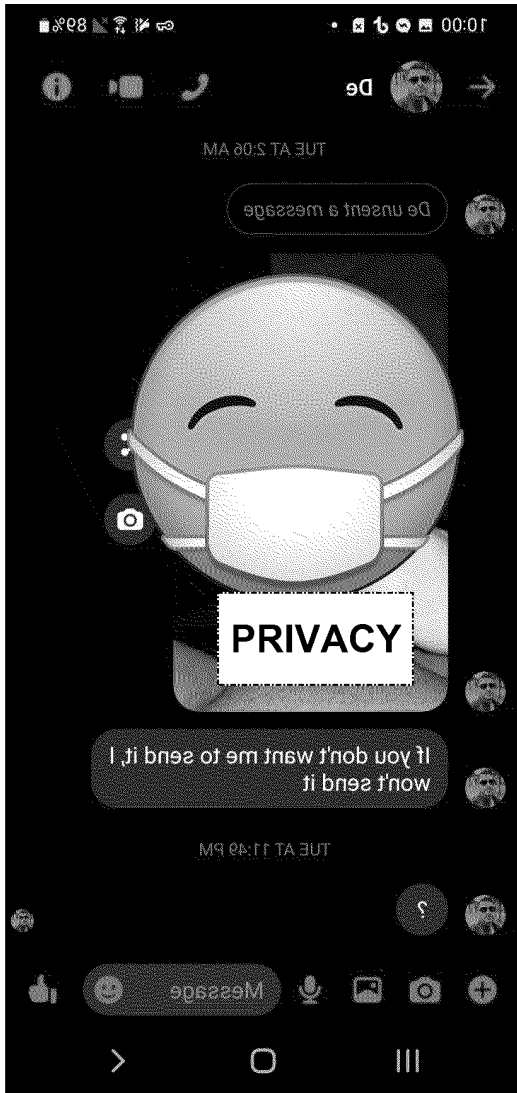

Typical friends of the account are approximately 80 percent male between the ages of 18 to 40. Comments posted by friends and followers of the account range from admiration, to sexually suggestive, and sometimes threatening.

There are few followers who have identified the profile as belonging to a minor child and are protective of her status and comments made. However, these same accounts often message the profile offline with suggestive messages of their own indicating they are more or less trying to “scare away the competition”.

While utilizing Facebook Messenger pictures and videos of genitalia are often the first message received by the persona, without any means of screening or previewing the message (I have redacted the image below and added the emoji).

Various screenshots of comments and interactions follow to provide a diverse detail of the profile. A full screen roll of the profile is also attached.
